Short instructions for disinfection of measuring prisms

1. Remove measuring prism from the holder.
2. Rinse the measuring prism under running water (guide time 60 seconds).
3. Clean the measuring prisms with a pH-neutral cleansing agent until no more soiling is visible.
4. Rinse the cleaned measuring prisms under running water (guide time 60 seconds).
5. Take the measuring prisms out of the plastic tray and place them on the lower tray of a clean, disinfected Desinset plastic insert.
6. Add at least 600 ml of disinfectant solution to the Desinset measuring beaker, so that the lower tray is completely immersed.
7. Maximum material-compatible exposure time: 60 minutes.
8. Once the exposure time has expired, remove the plastic insert, allow it to drip dry and then place it in the other clean and disinfected measuring beaker.
9. Place the clean and disinfected funnel on the plastic insert.
10. Remove the plastic insert with the measuring prisms.
11. Dry the measuring prisms individually with a clean and sterile, soft, disposable cloth.
12. Store the measuring prisms in a closed Desinset glass container.

NOTE!
The disinfectant must be replaced as follows:
- When visibly soiled
- Once a day or as specified by the manufacturer
- List of Disinfectants: www.haag-streit.com
- HAAG-STREIT recommends Desinset

FORBIDDEN!
- Disinfection with alcohol
- Cleaning with acetone
- Disinfection using UV radiation
- Sterilization using steam or ethylene oxide
- Temperatures above 60°C
