JOHN WEISS
Ophthalmic micro-surgical instruments
John Weiss has been an established brand for over 230 years. Its origins extend back to the 18th Century when its founder, John Weiss, left Austria for London, forming the company, John Weiss & Son, in 1787. His skills as a Master Cutler and Instrument Maker were soon widely acclaimed, and he received much recognition for his innovation and craftsmanship, including the award of a Royal Warrant as ‘Razor Maker’ to King William IV.

Throughout its rich history, the John Weiss brand has adapted and evolved to meet the ever-changing needs and demands of the modern Surgeon. The product range has expanded to over 2500 products, encompassing all sub-specialties of ophthalmic surgery; cataract, corneal, oculoplastic, glaucoma and vitreoretinal. Available in titanium and stainless-steel, the John Weiss instrument range includes; Forceps, Needle Holders, Scissors, Choppers & Manipulators, Specula, Extraocular and Specialist.

Haag-Streit UK is proud to be the Sole UK Distributor of the range - John Weiss is the leading brand of micro-surgical instruments domestically, and is currently exported to over 40 countries worldwide.

Forceps
Moorfields, non toothed / tying, notched, toothed, Capsulorhexis, Colibri, Cilia, Muscle/Strabismus, Lens, Artery, towel clamps, specialist

Needle Holders
Curved and straight, with or without catch

Scissors
Spring, bow / ribbon. De Wecker, Vannas, Westcott, Williamson-Noble, Corneal, Capsulotomy, Strabismus, Stevens tenotomy, specialist, utility

Choppers & Manipulators
Choppers & Splitters, Manipulators, Spatula / Repositors, Double ended combinations, Hooks, Vectis

Specula
Adjustable or Non-adjustable Infant and Adult

Extraocular

Specialist
General, Vitreoretinal, Corneal and Refractive, Cataract, Glaucoma, Diamond Knives, Corneal knives, Trephines, Trays. Veterinary: Ophthalmic, Exotic & small animal

Single use
Cannulae, Drapes, Sponges, wipes & wicks, Eye shields and patches, cautery

See overleaf for a guide on how to use this catalogue
A brief guide on how to use this catalogue

The pages within this catalogue have been designed to help you learn more about our products and their specifications.

Please use the pdf bookmarks on the left to navigate to the correct section.

To find a specific word or product code when using Adobe Acrobat or Reader, select Edit > Find from the application menu.

Example of product detail

Product code number – please specify this number when ordering.

Indicates material used to manufacture product: SS for stainless steel Ti for titanium.

0101562 SS
Capsulorhexis forceps, round body with standard tips. Standard shaft, 12mm tip to angle, overall length 103mm

Description detailing product physical specification alongside product image.
Please note: images are not shown at actual size.

Illustration of the tip detail if required.

NOTE: a product analysis is also included on the following page of some section dividers to help you to understand product parts in more detail.

Product care

For the most up-to-date information on how to look after your instruments, please refer to our website, www.haag-streituk.com

Repairs

Utilising the skills of the instrument maker, Haag-Streit UK provides a repair service for damaged or blunt micro-surgical instruments. For more information, please contact us on +44 (0) 1279 414969

Haag-Streit UK reserves the right to change specifications without notice.
Forceps
Moorfields, non toothed/tying, notched, toothed, Capsulorhexis, Colibri, Cilia, Muscle/Strabismus, Lens, Artery, towel clamps, specialist

Forceps form an extension of the surgeons fingers enabling secure handling of tissue, suture, intraocular lens etc. They can be used to grasp, hold, pull/push, lift, or tear depending on the tip design and application.
**Forceps anatomy**

**OVERALL LENGTH**

**TIP TO ANGLE LENGTH**

**TIPS**
- **Plain** – general purpose – removing sutures
- **Serrated** – general purpose – grasping tissue (atraumatic)
- **Platform** – for holding, tying and removing sutures
- **Notched** – for grasping and holding tissue (atraumatic), tying sutures (platform)
- **Toothed** – for grasping and holding tissue including muscle, tying sutures (platform)

**SHAFTS**
- **Straight** – for when access is direct
- **Curved** – for when access is restricted
- **Angled** – for when access is restricted
- **Colibri** – for good visualisation and positioning of tip
- **Cross action** – for maximum opening of tip within small incision
- **Formed** – accommodates natural curvature of crystalline lens

**HANDLES**
- **Flat** – for good manual grip and control of the tip but may require significant hand, wrist or forearm movement
- **Round** – rotating handle by rolling between fingers allows for ‘micro’ control of the tip with minimum movement
- **Cross action** – opens and closes tips by asserting and releasing pressure – offering ‘micro’ control
Moorfields forceps, straight with standard serrated tips. 14mm platform, overall length 113mm

Moorfields forceps, straight with standard serrated tips. 14mm platform, overall length 113mm

Moorfields forceps, straight with fine serrated tips. 14mm platform, overall length 113mm

Moorfields forceps, straight with fine serrated tips. 14mm platform, overall length 113mm

Moorfields Skov forceps angled with standard tips. 14mm platform, 15mm tips to angle, overall length 110mm

Jameson strabismus forceps, locking, child, angled left with 4 x 0.6mm teeth. 18mm tip to angle, overall length 99mm

Worth strabismus forceps, locking, angled right with 15mm longitudinal serrations. 13mm tip to angle, overall length 100mm

Worth strabismus forceps, locking, angled left with 15mm longitudinal serrations. 13mm tip to angle, overall length 100mm

Federio müllrectomy forceps, ‘T’ ended with 25mm bar, 12 x 0.8mm interlocking teeth, overall length 105mm
**Lens Forceps**

0101593 SS
IOL folding forceps, angled with grooved paddles. 10mm tip to angle, overall length 108mm

0109440 Ti
IOL folding forceps, angled with grooved paddles and central marker. 8mm tip to angle, overall length 108mm

0109163 Ti
IOL holding forceps, cross action, notch tip, angled with a catch. 25mm tip to angle, overall length 118mm

0109164 Ti
IOL holding forceps, cross action, notch tip, angled, no catch. 25mm tip to angle, overall length 118mm

0109448 Ti
IOL loading forceps, angled with atraumatic rounded tips and jaws. 15mm tip to angle, overall length 105mm

0109449 Ti
IOL loading forceps, straight with atraumatic rounded tips and jaws. 15mm jaws, overall length 110mm
0101472 SS
Halstead mosquito forceps, straight with 20mm serrated tips, overall length 125mm

0101473 SS
Halstead mosquito forceps, curved with 26mm serrated tips, overall length 125mm

0101474 SS
Wells artery forceps, straight with 20mm serrated tips, overall length 95mm

0101475 SS
Wells artery forceps, curved with 20mm serrated tips, overall length 95mm
**Forceps – towel clamps**

- **0101589**  
  Towel clamp, cross action, straight, overall length 85mm

- **0101583**  
  Towel clamp, non-penetrating, curved, 5mm ball & socket tip, overall length 90mm

- **0204136**  
  Rampley's sponge forceps, straight, 26mm serrated tips, overall length 182mm

- **0204147**  
  Backhaus towel clamp, curved, overall length 89mm
Polack Colibri forceps, 2 pronged for corneal suturing with 0.12mm teeth, 4.5mm platform, overall length 75mm

Scleral plug forceps, cross action, angled tips have a 2mm groove for gripping scleral plug. 8mm tip to angle, overall length 106mm

Watski sleeve forceps, reverse cross action for applying sleeve to retinal bands. Curved tips, overall length 116mm

Felipe fixation forceps, reverse cross action for fixating the eye during phaco. Angled, 12mm tip to angle, overall length 106mm

Serrafine cross action mini clamp, straight. 10mm serrated jaws, overall length 38mm

Serrafine cross action, feather weight, mini clamp, straight. 8mm serrated jaws, overall length 32mm

Serrafine cross action, mini clamp, curved. 16mm serrated jaws, overall length 48mm
Khaw conjunctival ‘T’ ended clamp with smooth, 12mm bar, overall length 86mm

Khaw-Shah conjunctival ‘T’ ended clamp with serrated 4mm bar, overall length 86mm

Adson forceps, straight with 10mm serrated tips, overall length 122mm

Adson forceps, straight with 0.5mm teeth, overall length 122mm
Needle Holders
Curved and straight, with or without catch

Needle holders are used when suturing – allowing the surgeon to both apply the needle at the correct angle to the tissue and achieve the correct depth. Stainless steel needle holders coming into contact with a magnetised surface will become magnetic, making it difficult to release a suture needle, for this reason titanium needle holders are often preferred.
Needle Holder anatomy

**Overall Length**

**Jaw Length**

**Tips**
- **Fine/micro** – for finest sutures
  - e.g. corneal graft, cataract
- **Standard** – general purpose
  - cataract, trabeculectomy
- **Heavy** – for larger sutures
  - e.g. strabismus, lid

**Jaws**
- **Straight**
- **Curved**

**Handles**
- **Flat** – for good manual grip and control of the tip but may require significant hand, wrist or forearm movement
- **Round** – rotating handle by rolling between fingers allows for ‘micro’ control of the tip with minimum movement
- **Catch option** – this is used to lock the jaws in the closed position – securing the needle during suturing

Choice depends on users preference although curved may give better visualisation of the wound.
Needle Holders

Curved with catch

- **0102007 SS**
  Castroviejo needle holder with a catch. Standard, curved, 10mm jaw, overall length 145mm

- **0102008 SS**
  Castroviejo needle holder with a catch. Heavy, curved, 12mm jaw, overall length 145mm

- **0102012 SS**
  Castroviejo needle holder, wide handle with a catch. Micro, curved, 10mm jaw, overall length 145mm

- **0102033 SS**
  Barraquer needle holder, round body with a catch. The curved 8mm jaw, overall length 140mm

- **0109173 Ti**
  Weiss needle holder, round body with a catch. Fine, curved, 10mm jaw, overall length 124mm

- **0102063 SS**
  Troutman needle holder, round body with a catch. Tapered, curved, 8mm jaw, overall length 118mm

- **0102069 SS**
  Barraquer needle holder, round body (no catch). Grooved, curved, 5mm jaw, overall length 135mm

Discontinued
Needle Holders
Curved without catch

0102009 SS
Castroviejo needle holder, no catch. Standard, curved, 10mm jaw, overall length 145mm

0102010 SS
Castroviejo needle holder, no catch. Heavy, curved, 12mm jaw, overall length 145mm

0102011 SS
Castroviejo needle holder, wide handle, no catch. Micro, curved, 10mm jaw, overall length 145mm

0102032 SS
Barraquer needle holder, round body, no catch. Fine, curved, 8mm jaw, overall length 140mm

0109174 Ti
Weiss needle holder, round body, no catch. Fine, curved, 10mm jaw, overall length 124mm

0102062 SS
Troutman needle holder, round body, no catch. Tapered, curved, 8mm jaw, overall length 118mm

0109209 Ti
Troutman needle holder, round body, no catch. Micro, tapered, curved, 8mm jaw, overall length 118mm
Troutman Ridgeway needle holder, round body, no catch. Fine, curved, 10mm jaw, overall length 125mm

Troutman Tritt needle holder, round body, no catch. Micro, tapered, curved, 10mm jaw, overall length 122mm

Troutman Tritt needle holder, round body, no catch. Heavy, tapered, curved, 10mm jaw, overall length 122mm

Micro needle holder, round body, no catch. Micro, tapered, curved, 8mm jaw, overall length 108mm

Lim’s needle holder, round body, no catch. Micro, curved, 5mm jaw, overall length 120mm

Lim’s needle holder, round body, no catch. Micro, curved 5mm jaw, overall length 120mm
**Castroviejo needle holder with a catch.**
Standard, straight, 10mm jaw, overall length 145mm

- **0109203 Ti**
Scissors
Spring, bow/ribbon. De Wecker, Vannas, Westcott, Williamson-Noble, Corneal, Capsulotomy, Strabismus, Stevens tenotomy, specialist, utility

Scissors can be used to cut tissue, sutures, dressings or to divide or separate tissue without cutting (blunt dissection). While scissors can be made from titanium we highly recommend stainless steel as it maintains its cutting edge longer. It is important that the scissor blades are kept sharp and for this reason, Haag-Streit UK provides a sharpening service.
Scissors anatomy

- **OVERALL LENGTH**
- **CUTTING LENGTH**
- **JAW LENGTH**

**TIPS**

- **Sharp/pointed**
  - can pierce tissue as well as cut
- **Rounded**
  - for cutting only

**JAWS**

- **Straight**
  - good for when direct access is available or when a straight cut is required
- **Curved**
  - to reach more difficult areas or when a curved cut is required. May allow better visualisation of tips
- **Angled**
  - enables blades to be positioned at the correct angle to the tissue, particularly useful when excising

**HANDLES**

- **Spring**
  - a good manual grip with excellent control of the tip means that these are the best choice for delicate work.
- **Bow or ribbon**
  - traditional design, good utility scissor or for non-delicate excisions such as extraocular. May require significant hand and wrist movement.
- **Hinge**
  - a time tested design, blades close by squeezing handle together. Generally used for iris excision.
De Wecker Iris Scissors. Angled on flat with sharp tips. Max cutting length 5mm, blade length 8mm, overall length 110mm

De Wecker iris scissors. Angled on flat with sharp tips. Max cutting length 9mm, blade length 12mm, overall length 115mm

De Wecker Iris Scissors. Angled on flat with right tip sharp and left tip rounded. Max cutting length 9mm, blade length 12mm, overall length 115mm

De Wecker Iris Scissors. Angled on flat with left tip sharp and right tip rounded. Max cutting length 9mm, blade length 12mm, overall length 115mm

Barraquer Iris Scissors. Angled on flat with sharp tips. Max cutting length 6mm, blade length 8.5mm, overall length 58mm

Scissors, Ribbon style, curved with rounded tips. Max cutting length 18mm, blade length 26mm, overall length 102mm
This group covers a wide variety of instruments commonly called ‘side port’ or ‘second’ instrument. They are mainly used through the paracentesis incision but can also be used through the principle incision. Choppers and splitters are generally used to break up the crystalline lens while manipulators are used to move lens fragments or the intraocular lens (IOL). Other instruments that are of a similar design are hooks, used to atraumatically manipulate the lens or capsular bag; and vectis.
Chopper and Manipulator anatomy

**SHAFT**
A straight, curved and angled shape is designed to position the tip at the correct angle to the tissue or structure to allow maximum efficiency.

A formed shape follows the curvature of the crystalline lens.

**HANDLE**
May be single ended or double ended – offers versatility as can combine two instruments in one.

**TIP**

- **Chopper/Splitter**: used during phacoemulsification (Phaco) chop procedure to manually break up the crystalline lens
- **Manipulator**: used to move lens fragments during Phaco
- **Dialer**: used to position the Intraocular lens implant (IOL)
- **Hook (micro)**: designed to ‘push’ or ‘pull’ the iris or lens capsule
- **Vectis**: a traditional instrument designed to support the crystalline lens and aid with its removal during intracapsular cataract extraction procedure
- **Repositor**: used to reposition tissue, usually iris. May also be used to separate adhesions (synechia) between the iris and lens capsule.
Phaco chopper, angled with 1mm blade, 10mm tip to angle, overall length 112mm

Phaco chopper, angled with a 1mm 30° left, offset blade. 10mm tip to angle, overall length 112mm

Koch phaco chopper, angled with a 1mm blade. 10mm tip to angle, overall length 110mm

Phaco chopper, angled with an extra long 1.5mm blade. 10mm tip to angle, overall length 115mm

Maidstone oculoplastic hook for lateral canthoplasty with fenestration at tip. 13mm hook, overall length 138mm

Assaf muscle hook, adult, flat grooved 7mm hook, overall length 145mm

Assaf muscle hook, child, flat grooved 5mm hook, overall length 145mm
Lens expressor, angled on flat, rounded tip. 10mm tip to angle, overall length 145mm

Kilner hook, straight with a 3mm sharp pointed hook, overall length 140mm

Gilles skin hook small, straight with a 3mm sharp pointed hook, overall length 185mm

Gilles skin hook large, straight with a 4mm sharp pointed hook, overall length 185mm
0108062  SS
Snellen vectis, straight with 8.5mm x 2.5mm oval, overall length 140mm

0108063  SS
Bell Taylor vectis, straight with 7.0mm x 4.5mm oval, overall length 140mm

0108064  SS
Landolt vectis, straight with 5.5mm x 4mm oval, overall length 125mm

0108070  SS
Narrow vectis, straight with 7.5mm x 2.5mm oval, overall length 138mm
Specula are designed to hold the eyelids apart during surgery allowing adequate access to the eye. They may be adjustable or non-adjustable as well as being designed for a variety of approaches such as temporal or superior.
Specula anatomy

**NON-ADJUSTABLE**

- **MAXIMUM WIDTH**
- **BLADE LENGTH**

**ADJUSTABLE**

- **MAXIMUM TO MINIMUM WIDTH**
- **OVERALL LENGTH**

**Open**: allows good access for instruments e.g. Phaco handpiece that might otherwise rest on the top bar of a closed blade making surgery difficult

**Closed**: good hold on eyelids for procedures where the top bar does not cause a problem e.g. trabeculectomy or temporal incision phaco

**Wire**: more comfortable for the patient under local anaesthetic, particularly when used with a sliding wire speculum or a non-adjustable speculum

**Solid**: holds eyelids securely
Barraquer speculum for baby with 12mm closed wire blades. 14mm maximum opening, overall length 30mm

Barraquer speculum for child with 12mm closed wire blades. 15mm maximum opening, overall length 42mm

Barraquer speculum for child with 11mm solid blades. 18mm maximum opening, overall length 40mm

Note: Maximum opening for non-adjustable speculum is measured at rest and may be reduced under lid tension
Barraquer speculum for adult with 17mm closed wire blades. 16mm maximum opening, overall length 45mm

Barraquer speculum for adult with 15mm solid blades. 18mm maximum opening, overall length 38mm

Kratz-Barraquer speculum for adult with 13mm open wire blades. 18mm maximum opening, overall length 45mm

Kratz-Barraquer speculum for adult with 8mm open wire blades. 18mm maximum opening, overall length 42mm

Kratz-Barraquer temporal incision speculum for adult with 12mm open wire blades. 18mm maximum opening, overall length 45mm

Sauer speculum with 10mm solid blades. 18mm maximum opening, overall length 16mm

Note: Maximum opening for non-adjustable speculum is measured at rest and may be reduced under lid tension
Clarke speculum for baby with 8mm open blades. 30mm maximum opening, overall length 65mm

Clarke speculum for child with 12mm open blades. 30mm maximum opening, overall length 70mm

Jaffe lid retractor, small with 10mm open wire blade, overall length 40mm. Comes as a pair.

Discontinued
Barraquer sliding speculum for adult with 17mm closed wire blades. 25mm maximum opening, overall length 35mm

Kratz-Barraquer sliding speculum for adult with 12mm open wire blades. 25mm maximum opening, overall length 32mm

Pierse sliding speculum for adult with 12mm open wire blades. 25mm maximum opening, overall length 35mm

Clarke speculum for adult with 14mm open blades. 30mm maximum opening, overall length 85mm

Lieberman speculum for adult with 15mm open ‘K’ wire blades. 45mm maximum opening, overall length 84mm
Lieberman temporal incision speculum for adult with 15mm open ‘K’ wire blades. 35mm maximum opening, overall length 78mm*

Lieberman speculum for adult with 15mm open ‘V’ wire blades. 35mm maximum opening, overall length 82mm*

Lieberman temporal incision speculum for adult with 15mm open ‘K’ wire blades. 35mm maximum opening, overall length 78mm*

Lieberman speculum for adult with 14mm solid blades. 40mm maximum opening, overall length 82mm

Lieberman speculum for adult with 15mm solid blades, suitable for both standard and temporal incision 45mm maximum opening, overall length 75mm (Reversible)

*Aspirating versions are available on request
Knapp speculum for adult with 15mm open wire blades. 33mm maximum opening, overall length 84mm

Lancaster speculum for adult with 15mm solid blades. 38mm maximum opening, overall length 82mm

Jaffe lid retractor, large with 15mm open wire blade, overall length 40mm. Comes as a pair.
Extraocular procedures are performed on the external structures of the eye and surrounding tissue (adnexa). These are usually dealt with by Oculoplastic, Strabismus or Orbital specialists and include surgery to the eyelids, extraocular muscles, lacrimal and orbital structures.
How to dismantle and reassemble the take apart Kerrison punch

Sphenoidal punches are designed for cutting the sphenoid bone during dacryocystorhinostomy (DCR) surgery. The John Weiss portfolio includes a specific range of Kerrison punches, referred to as ‘take-apart’, that are specifically designed to be taken apart for ease of cleaning.

TO DISMANTLE
Squeeze handle together to close tip, pull hammer down and release the handle. The top bar can now be lifted to clean. Note: the top bar cannot be fully removed from the instrument.

TO REASSEMBLE
Hold with tip pointing down. Ensure ejector is pushed fully downwards towards the cutting edge.

Lower the top bar ensuring slots are located correctly then squeeze the handle closed. Finally push the hammer up – locking everything in place.
Lid instruments

Chalazion and Cyst

- **Green tarsal cyst forceps with 10mm round, serrated plate, overall length 90mm**
  - Code: 0101412 SS

- **Birmingham tarsal cyst forceps, with 20mm x 14mm smooth, oval plate, overall length 90mm**
  - Code: 0101413 SS

- **Ayres tarsal cyst forceps with 7mm smooth, round plate, overall length 90mm**
  - Code: 0101415 SS

- **Desmarres chalazion forceps with 16mm x 11mm smooth, oval plate, overall length 86mm**
  - Code: 0101422 SS

DCR intubation bodkin, double ended with 2 x round tipped, angled 44mm bodkins (25mm tip to angle), attached to 500mm of silicone, latex free tubing

Crawford intubation set, double ended with 2 x olive tipped, straight 152mm bodkins, attached to 300mm of silicone, latex free tubing. Retrieval device included

DCR intubation bodkin, double ended with 2 x round tipped, straight 44mm bodkins, attached to 300mm of silicone, latex free tubing
Retractors, Hooks & Specula

0206020 SS
Killian nasal speculum, adjustable with 50mm blades, maximum opening 30mm, overall length 140mm

0107057 SS
Stevenson lacrimal sac retractor, adjustable with 10mm blades each with 3 prongs, maximum opening 20mm, overall length 82mm

0107092 SS
Fison retractor with 20mm deep angled blade, 11mm wide, overall length 130mm

0107072 SS
Watson orbital retractors, maleable. Available as a set of 4 or individually as below.

0107073 SS
Watson maleable orbital retractor, single 8mm x 30mm blade, overall length 152mm

0107074 SS
Watson maleable orbital retractor, large with 2x 4mm x 42mm pronged blades, overall length 162mm

0107075 SS
Watson maleable orbital retractor, medium with 2x 4mm x 36mm pronged blades, overall length 156mm

0107076 SS
Watson maleable orbital retractor, small with 2x 4mm x 24mm pronged blades, overall length 145mm
Retractors, Hooks & Specula

Desmarres lid retractor, large with 15mm blade, overall length 140mm

Desmarres lid retractor, medium with 13mm blade, overall length 140mm

Desmarres lid retractor, small with 12mm blade, overall length 140mm

Jaffe lid retractor, small with 10mm open wire blade, overall length 40mm. Comes as a pair

Jaffe lid retractor, large with 15mm open wire blade, overall length 40mm. Comes as a pair

Knapp retractor, straight with 4 x 5mm rounded, hooked prongs, overall length 133mm

Rollet retractor, straight with 4x 4mm sharp, hooked prongs, overall length 135mm
0105082
Maidstone oculoplastic hook for lateral canthoplasty with fenestration at tip. 13mm hook, overall length 138mm

0105080
Assaf muscle hook, adult, flat grooved 7mm hook, overall length 145mm

0105081
Assaf muscle hook, child, flat grooved 5mm hook, overall length 145mm

0105102
Kilner hook, straight with a 3mm sharp pointed hook, overall length 140mm

0202352
Gilles skin hook small, straight with a 3mm sharp pointed hook, overall length 185mm

0202354
Gilles skin hook large, straight with a 4mm sharp pointed hook, overall length 185mm

Specialist Instruments
General, Vitreoretinal, Corneal and Refractive, Cataract, Glaucoma,
Diamond Knives, Corneal knives, Trephines, Trays.
Veterinary: Ophthalmic, Exotic & small animal

Some specialist areas of surgery such as Corneal, Cataract, Glaucoma,
Refractive, Vitreoretinal and Veterinary (Ophthalmic and Small & Exotic
animals) require instrumentation specific to the demands of their
particular surgery. Please contact us if you don’t see what you want as
new instruments are being developed all the time.
Using microsurgical instruments

Although most damage occurs to instruments during processing and cleaning, it is important to make sure that they are also handled correctly during the surgical procedure. Here are some guidelines, please note that these are of a general nature and are not intended to replace any country or institution specific protocol or procedures.

• Always keep microsurgical instruments in a purpose designed tray while not actually in use and never allow them to lay loose together on the trolley.

• Only use trays designed specifically for microsurgical instruments as standard instrument trays may not offer adequate grip for such delicate instruments or may damage them by applying too much pressure in the wrong place.

• Carefully inspect all instruments under magnification before and after use.

• Only people who are trained in the use of microsurgical instruments should handle them e.g. surgeons and specialist practitioners

• Instruments should only be used for their intended purpose, anything else e.g. cutting a drape with Westcott scissors, may damage them.

• Never pick up instruments by tips or let tips touch anything other than the tissue they are designed for. This prevents both damage to the instrument and injury to the user.

• Do not let the tips touch the trolley drape, it may damage the fine points or teeth, and if the drape has fibres, these may be transferred to the instrument tips.

• When no longer in use, wipe clean with demineralised/sterile water and thoroughly flush through any lumen with cool demineralised/sterile water, this will prevent proteinaceous material from sticking to the instrument.

• Scalpel blades, knives and scissors require particular care
  - if the instrument does not have a blade cover it must be passed between practitioners by the handle so that the cutting edge, and the point, face downwards. This must be done with great care to prevent injury.
  - If available with a blade cover, a knife or scalpel should be passed between practitioners with the blade sheathed and by the handle. The user should then un-sheath the blade, use it, then re-sheath before passing the knife back. Care should still be taken even though the blade is protected.
  - particular care should be taken when removing a blade from a scalpel handle, this should never be done using the fingers, instead artery forceps should be used and the blade removed, angled away from the practitioner’s body.

• Get to know the names of the instruments within a set as well as the specific instruments used for each procedure and the general order in which they are used. Following the procedure will enable anticipation of the next instrument required and give time to locate and prepare it.

• Avoid stainless steel instruments from coming into contact with any magnetised objects as this may transfer to them making their use difficult, e.g. suture needles may be difficult to let go of when a stainless steel needle holder becomes magnetised.

• Cleaning and sterilisation should be performed by those qualified to do so. For our most up-to-date guidelines visit www.haagstreituk.com
Castroviejo caliper and rule, double sided with 20mm scale in 0.5mm increments

Standard 150mm / 6 inch ruler

Foreign body needle (sharp 1mm x 7mm) and spud (straight, round 1mm x 24mm) double ended with protective caps, overall length 118mm

Nine edged crescent blade
- 3.0mm wide 0113084 Ti
- 2.0mm wide 0113085 Ti
Corneal knives

0114022 SS
Tooke knife, straight with 15mm x 2.5mm crescent blade for corneal scraping or splitting, overall length 115mm

0114025 SS
Desmarres corneal knife medium, straight with 10mm x 4mm hockey stick blade, overall length 130mm

0114026 SS
Desmarres corneal knife medium, straight with 10mm x 4.5mm hockey stick blade, overall length 130mm

0114027 SS
Desmarres corneal knife large, straight with 10mm x 5mm hockey stick blade, overall length 130mm

General Knives

0114197 SS
No.11 sterile scalpel blades box of 100

0114199 SS
No.15 sterile scalpel blades box of 100

0114198 SS
Scalpel handle No. 9 (takes No.11 blades), overall length 115mm

0114200 SS
Scalpel handle No. 3 (takes No.15 blades), overall length 120mm

Trays

Polymer – removable lid

0112013
Tray holds 10 instruments with silicone finger matting. Outer size W260mm D160mm H25mm. Inner size W250mm D150mm H20mm.

0112015
Tray holds 20 instruments with silicone finger matting. Outer size W390mm D265m H25mm. Inner size W380mm D250mm H20mm.

0112014
Tray, 2 tier, holds 20 instruments with silicone finger matting. Outer size W260mm D160mm H45mm. Inner size W250mm D150mm H40mm.

0112019
Tray, 2 tier, holds 40 instruments with silicone finger matting. Outer size W390mm D270mm H45mm. Inner size W380mm D255mm H40mm.
Tray holds 3 instruments with silicone finger matting. Outer size W175mm D110mm H25mm. Inner size W160mm D100mm H20mm.

Diamond Knife tray with silicone grip for 1 knife. Outer size W160mm D70mm H25mm. Inner size W150mm D60mm H20mm.

Tray holds 1 - 2 instruments with silicone finger matting. Outer size W160mm D70mm H25mm. Inner size W150mm D60mm H20mm.

Tray holds 3 instruments with silicone finger matting. Outer size W200mm D110mm H25mm. Inner size W190mm D100mm H20mm.

Number of instruments per tray is a guide only.
Tray with 2 areas. Area 1 holds 20 instruments with 4 strips of silicone finger matting. Size W280mm D260mm H25mm.

Area 2 holds larger items such as a phaco handpiece. Size W260mm D160mm H50mm.

Total size of tray outer W510mm D270mm H70mm. Inner W500mm D260mm H65mm.

Number of instruments per tray is a guide only.
VETERINARY OPHTHALMIC INSTRUMENTS

The following section shows basic veterinary surgery sets and recommended additions you may wish to add to a set. Please contact us on +44 (0) 1279 414969 if you require further information.

We would like to thank all the staff at the Eye Veterinary Clinic, Leominster, Herefordshire and Iain Cope BSc (VetSc) Hons BVM&S CertAVP(ZooMed) MRCVS for their help and advice in putting together this selection of instrumentation.
Small & exotic animal surgery

Single use items such as swab sticks, drapes and knives are also available from John Weiss please see the Single Use section, pages 121-128 for our full range or contact us at sales@johnweiss.com

Storing your micro instruments in purpose designed trays will protect your investment. See pages 108-110 for the full range of John Weiss sterilisation trays
Some surgical items would be hard to decontaminate and re-sterilise such as items with a lumen (cannula), swabs, drapes etc. These are therefore supplied as sterile packaged, single use items. In some instances it may be useful to have single-use instruments, such as when patients have highly-contagious conditions.
Caring for your John Weiss diamond knife – how to use a diamond knife cleaning block

John Weiss diamond knives have the finest surgical cutting edge currently available, however they are extremely delicate and should be handled with great care.*

Normal use does not cause any deterioration of the cutting edge, only incorrect handling, such as letting the knife come into contact with other instruments, may damage it. Take care never to touch the cutting edge as it is extremely sharp. Always keep the diamond retracted in the handle when not in use and during sterilisation.

The use of a diamond knife cleaning block is recommended to remove sticky residue from the blade such as viscoelastic. This should be done as soon as possible after use as it may be difficult to remove once it has dried – a ‘dirty’ blade may seem blunt.

Moisten one end of the diamond knife cleaning block with demineralised or sterile water, leaving one half dry. Carefully stab the diamond blade vertically into the moistened portion several times. Take great care not to apply any sideways pressure as that might snap the blade, particularly when cleaning an angled blade. The diamond is now clean and should be gently stabbed vertically several times into the dry portion of the block to dry and polish it – again take care not to apply any sideways pressure.

Finally retract the diamond into the handle and replace in its tray.

For full guidelines including Ultrasonic Cleaning & Disinfection and Sterilisation, please refer to the ‘Care, Maintenance & Reprocessing Guidelines for John Weiss Diamond Knives’ supplied with each new diamond knife.

* Please note that the advice given here is intended as a quick guide only and does not replace the validated ‘Care, Maintenance & Reprocessing Guidelines for John Weiss Diamond Knives’ supplied with each new diamond knife.

Weiss cautery, low heat, temperature at activation 704°C (1300°F). Overall length 125mm without cap – 147mm with cap. 1 cautery/packet; 10 packets/box

0120133
Epilation needles straight, 0.125mm x 8mm tip, 20mm overall length, for use with electrolysis unit (unit not available). Sterile wrapped individually, 50/box
**Instrument Care**

Each John Weiss instrument is hand-crafted with meticulous care and has to pass a final 100% inspection before being released. By following the Reprocessing Instructions provided with each new instrument and by correct handling, you will protect your investment and ensure that your John Weiss instruments remain in prime condition for many years.

**Care of delicate surgical instruments starts on delivery**

Carefully remove your new instruments from their boxes and examine under magnification to be assured they are in perfect condition.*

Once you have examined and are happy with the instruments they should be cleaned carefully using specialist instrument wipes (see Single Use section, code No.: 1701010) and placed in a sterilising tray designed for micro-surgical instruments (see Specialist section for the John Weiss range).

Diamond knives and other specialist instruments may require specific attention – please refer to the separate guidelines which will be provided for these. For the latest information and a copy of our validated Reprocessing Instructions, please refer to our website, www.haagstreituk.com.

*In the unlikely event that you are unhappy with your instruments in any way, you should notify us immediately on +44 (0)1279 414969 or email sales@haag-streit-uk.com.

**Repairs**

Utilising the skills of the instrument maker, Haag-Streit UK provides a repair service for damaged or blunt micro-surgical instruments. For more information, please contact us on +44 (0)1279 414969 or email sales@haag-streit-uk.com.
